[Cli Command for working with HDI Container in CAP Project](#)

Cli Command for working with HDI Container in CAP Project

Cheat sheet to work with HANA in Cloud Application Programming Model using CLI Commands.

This is an alternative approach, when HANA Project Explorer and Run Configuration Tools are not available.

CLI commands to be used when working with HANA in CAP Project

1. Add mta to CAP Project. (**optional- use this command if mta.yaml is missing in your project)

```
cds add mta
```

2. Add hana feature to an existing project

```
cds add hana
```

3. Compile .cds files in CAP project and generate HANA Artifacts

```
cds build
```

4. Connect to cloud foundry environment and set org and space for deployment

```
cf login
```

5. Create hdi container service:

Syntax:

```
cf create-service <SERVICE_OFFERING>  
<PLAN> <SERVICE_INSTANCE> [-c  
PARAMETERS_AS_JSON]
```

Example:

```
cf create-service hana hdi-shared  
CAPDemo-hdi -c '{"schema":"CAPDEMO"}'
```

6. check the status of hdi container service.

Syntax:

```
cf service <SERVICE_INSTANCE>
```

Example:

```
cf service CAPDemo-hdi
```

7. Create service key for hdi container service:

Syntax:

```
cf create-service-key
```
